

# PU straps

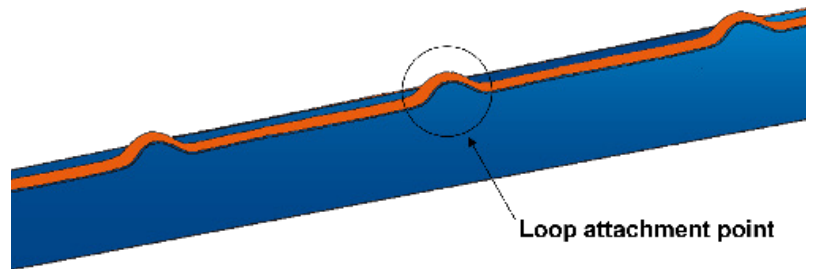

## Flexibore® installation accessory

Power cable secured with PU straps

Flexibore® is manufactured with a coloured strip, making loop attachment points to secure your power cable. **Polyurethane (PU) straps** are the suggested attachment method for longer power cables over 150 m deep instead of cable ties.

- **PU straps** are 2 mm thick and approximately 18 mm wide.
- Each strap is fitted with a tri-glide strap adjuster and a Camlock buckle.
- The strap length is proportionate to the hose diameter.
- The strap is first tied to the power cable then slipped through the loop attachment point the same way a belt slips through belt loops before being secured by the buckle.
- One PU strap is used at each loop attachment point.

Flexibore® has a strip with loop attachment points to secure your power cable using the recommended method.
